

Story

Date	7 October 2026
Team ID	N/A
Project Name	Food Analysis: Cuisine Demand & Order Trends Analysis
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Top cuisine:** Dessert by 1463
- **Demand over time:** Steady order distributions across major Indian cities (Bangalore, Chandigarh, Delhi, Hyderabad, Mumbai, Pune), maintaining consistent high-volume demand between 1,298 and 1,463 orders per category
- **Value and revenue:** Fast Food and Desserts drive high transaction frequencies across metro hubs like Bangalore (1,446) and Mumbai (1,463), while Chinese cuisine shows strong regional peaks in Pune (1,444) and Delhi (1,430)
- **Recommendation:** Optimize inventory allocation and local restaurant onboarding for high-density cuisines per city—specifically expanding Dessert partnerships in Mumbai and Chinese offerings in Pune and Delhi.

Activity 2:

Publish Story on Tableau Public and Paste Public link below
